

Aim:

Write a Python function that takes two lists and returns True if they are equal otherwise false

Source Code:

listEqulusingFun.py

```
l1=list(input("Enter list 1 elements Separated By commas : "))
l2=list(input("Enter list 2 elements Separated By commas : "))
print(l1==l2)
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter list 1 elements Separated By commas : 1,2,3,4,5
Enter list 2 elements Separated By commas : 1,2,3,4,5
True

Test Case - 2
User Output
Enter list 1 elements Separated By commas : 1,2,3
Enter list 2 elements Separated By commas : 4,5,6
False
