

Aim:

Write a python program to get string, int, float input from user

Source Code:`dataTypes.py`

```
x=input("Enter any string: ")
print(x)
b=int(input("Enter number: "))
print(b)
c=float(input("Enter float input: "))
print(c)
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter any string: CodeTantra
CodeTantra 12
Enter number: 12
12 13.3
Enter float input: 13.3
13.3
