S.No: 28	Exp. Name: ***Write python program in which an function(with single string parameter) is defined and calling that function prints the string parameters given to function.***	Date:2023-09-23

Aim:

Write a python program in which a function(with a single string parameter) is defined and calling that function prints the string parameters given to the function.

Source Code:

funwithStr.py

```
x=input("Enter A String : ")
def print_Hello(x):
        print(x)
print_Hello(x)
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter A String : Hello World
Hello World
